

Special polyurethane compositions which cross-link by condensation and contain aminosilanes, a process for their preparation and their use

Abstract

This invention relates to polyurethane compositions which cross-link via a silane polycondensation and contain at least one alkoxy silane-functional polyurethane, at least one basic filler, at least one reaction product of an aminosilane with a maleic or fumaric ester, at least one organometallic compound and optionally additional auxiliary substances, to a process for their preparation, and to their use.
